Abstract

The invention relates to a process for the preparation of L-amino acids, in particular L-threonine, in which the following steps are carried out:

- 5 a) fermentation of the microorganisms of the
 Enterobacteriaceae family which produce the desired
 L-amino acid and in which the eno gene or nucleotide
 sequences or alleles which code for it are enhanced,
- b) concentration of the desired L-amino acid in the mediumor in the cells of the microorganisms, and
 - c) isolation of the desired L-amino acid.
